Feedback on Your Project

To: Charles Pan <cpan18@newarka.edu>

Hey Charles,

Your program has really come together. After using it, I got pretty big. I really liked the diversity of workouts I could choose from, especially being able to target a certain group of muscles. I also think the progress graph was a really cool touch. But I was a bit confused as to what the graph was displaying-- I think you can fix this by adding much needed axis titles. Also, I think you should hide the "View Stats" option initially, because when I clicked on it without logging in any data, the program crashes. Or, if the user chooses it initially, then a window could pop up and say "No stats to view!"

Thanks, and job well done!
Ryan
